COMPANY OVERVIEW

Confidence at every level.

At height, reliability isn't optional. That's why Skyreach delivers safe, efficient and high-performing access solutions that help you build with confidence. We make hiring quality access equipment safer, easier, and less tedious thanks to our team of experts who know what you need to keep the job moving.

Operating since 1994 and with local, on-the-ground support throughout the East Coast, Skyreach is one of Australia's few specialists in EWP and access equipment hire. This singular focus positions us as an expert partner for projects that require superior quality equipment with safety assurance baked in.

Our goal is to set the benchmark in safety, reliability, service, and operational excellence, and our rental fleet is continually renewed and updated with the latest manufacturers' technology. Fully compliant with Australian Standards and supplied with risk assessments, manuals and service records, our hire fleet includes scissor, boom and man lifts; telehandlers; crawlers; hybrid units; lighting towers; specialised access essentials such as duct lifters and pipe racks; and a wide range of OEM attachments.

And when you contact us to hire, you won't be palmed off to a call centre: at Skyreach, you'll always hear a familiar voice on the line. Our team of dedicated people, many of whom have been with the business for decades, are committed to the strong relationships we've built with our customers. We make it our business to know your business, so we can keep your job moving with a minimum of fuss and a healthy dose of down-to-earth customer service.

We've been quietly getting it right for a long time, and we'd be happy to show you how Skyreach can help you stay safe at height and stress-free on the ground.

OUR DIFFERENCE

Elevated standards on every single job.

Specialised technical advice

We're an EWP specialist, not a generic hire company. Our expert team know their stuff and will help you get the right equipment for the job, every time – no matter how complex your requirements.

Site inspections

If you're not sure which machine is right for you, our sales staff are available for site inspections to ensure you get the most appropriate and cost-effective solution for your needs.

Reliable, low-hour fleet

An extensive fleet of modern access equipment sets us apart from other rental operators. We invest in equipment from renowned OEMs such as JCB, Genie, and Skyjack, whose safety focus mirrors our own.

Sustainability & Innovation

We prioritise investment in machines that provide a higher, heavier, and more dynamic lift with improved work envelope and safety features. This ensures more efficient operation and reduced fuel requirements, especially with our hybrid and electric options.

In-house workshops

All Skyreach branches are supported by fully equipped workshops staffed by responsible service teams. Regular in-house and manufacturers' training keep our team's skills sharp when working on the latest digitally enabled machines.

24/7 Support

Each branch has a dedicated Field Service Team with fully equipped service vehicles (including mine spec vehicles in relevant areas). We're on call 24/7 to support you and keep your project rolling.

Safety & Compliance

If it's not safe, it doesn't go out. No exceptions. Each machine gets a detailed inspection upon return, and all safety and compliance records are available on board for peace of mind.

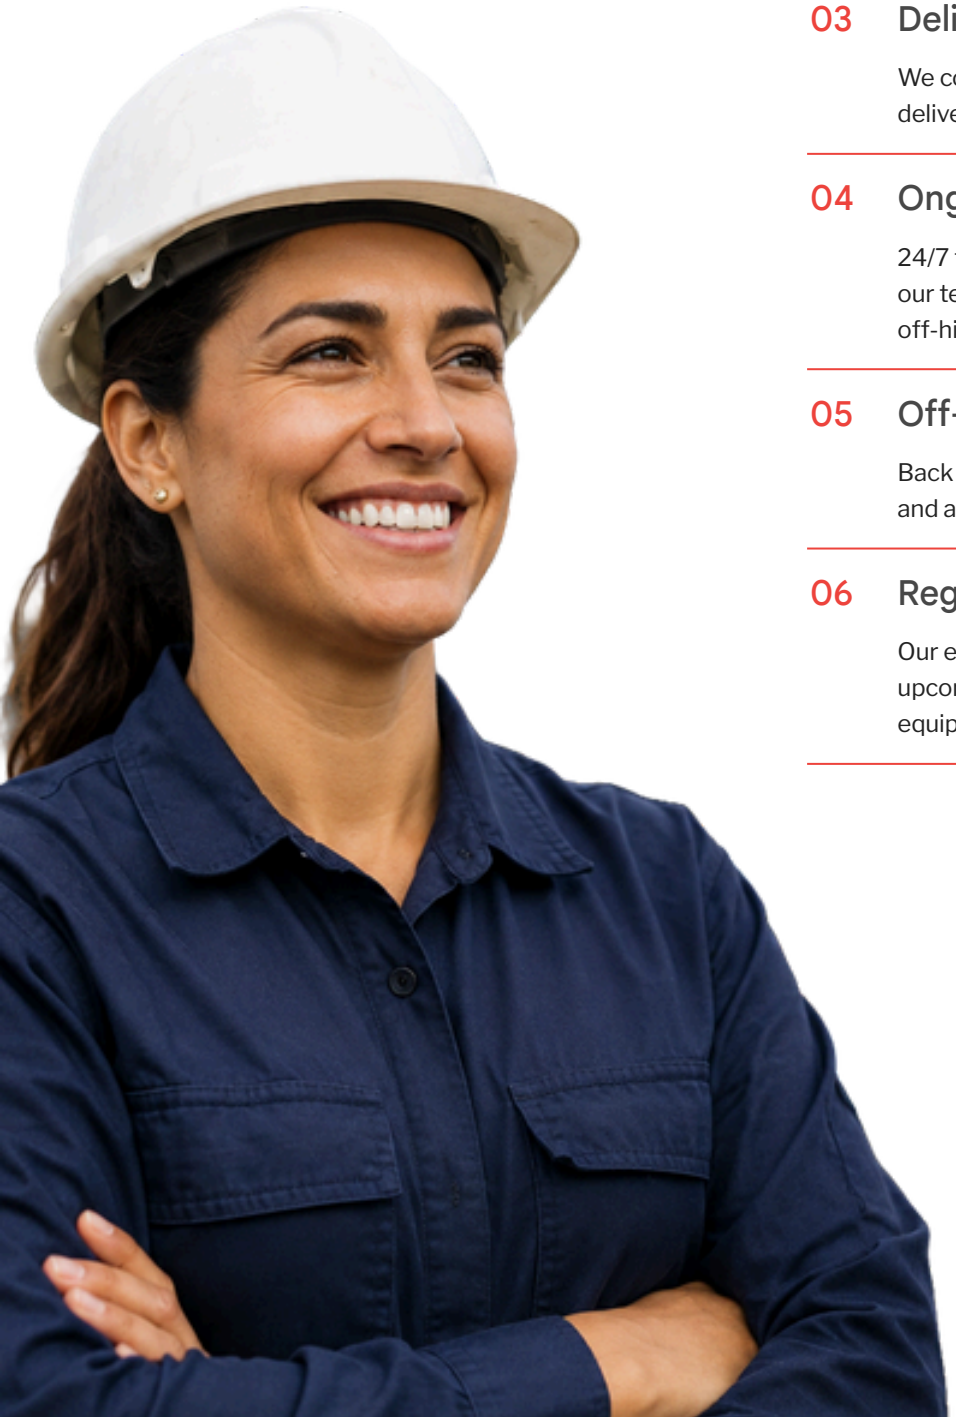

"We've worked with a number of equipment hire companies over the years, but Skyreach stands out for all the right reasons. Their team is responsive, knowledgeable and genuinely committed to helping us get the job done safely and efficiently. From the quality of the equipment through to the service and support, everything is handled professionally. Skyreach has become a trusted partner for our projects, and I wouldn't hesitate to recommend them."

MATT AT SYDNEY WIRING SOLUTIONS

OUR PROCESS

End-to-end support

01 Discussion and Site Visit

Our team listens to your requirements and recommends the right equipment that's on spec and within budget.

02 Pre-inspection and Safety Checks

Our service team assesses each asset and ensures the inspection reports, risk assessment, logbook and manual are complete and in place.

03 Delivery & Logistics

We coordinate with our trusted transport partners to deliver your equipment when and where you need it.

04 Ongoing Support

24/7 field service is available for peace of mind, and our team is always here to help when you're ready to off-hire.

05 Off-hire Inspection

Back at our workshop, the equipment is inspected, and a post-hire check is conducted.

06 Regular Check-ins

Our experienced sales team stays abreast of your upcoming needs and keeps you updated on equipment availability.

SAFETY & COMPLIANCE

Reducing risk on site

Safety is the number one priority at Skyreach – both for our customers and our internal team. Our Zero Harm culture is evident in our staff, service, training, workshops, equipment, and operations.

Hire with confidence

If it's not safe, it doesn't go out. No exceptions. Our service team conducts comprehensive maintenance and inspections in accordance with AS/NZS 2550, and will never compromise on machine condition.

Operate with confidence

Skyreach's rental fleet is fully compliant with AS/NZS 1418, and as a member of the EWPA and TSHA, we continue to innovate in line with industry best practices.

Build with confidence

On-site, we make sure you've got the documentation you need to run a safe, successful project. Your equipment is always supplied with:

Inside yellow pouch:

- Grey card displaying the equipment's date of manufacture, serial number, Skyreach plant number, date of last annual inspection and the issuing service technician's name.
- Log book for the licensed operator to complete on a daily or shift-change basis.
- A copy of the most recent 90-day inspection report.
- A copy of the most recent annual inspection report.

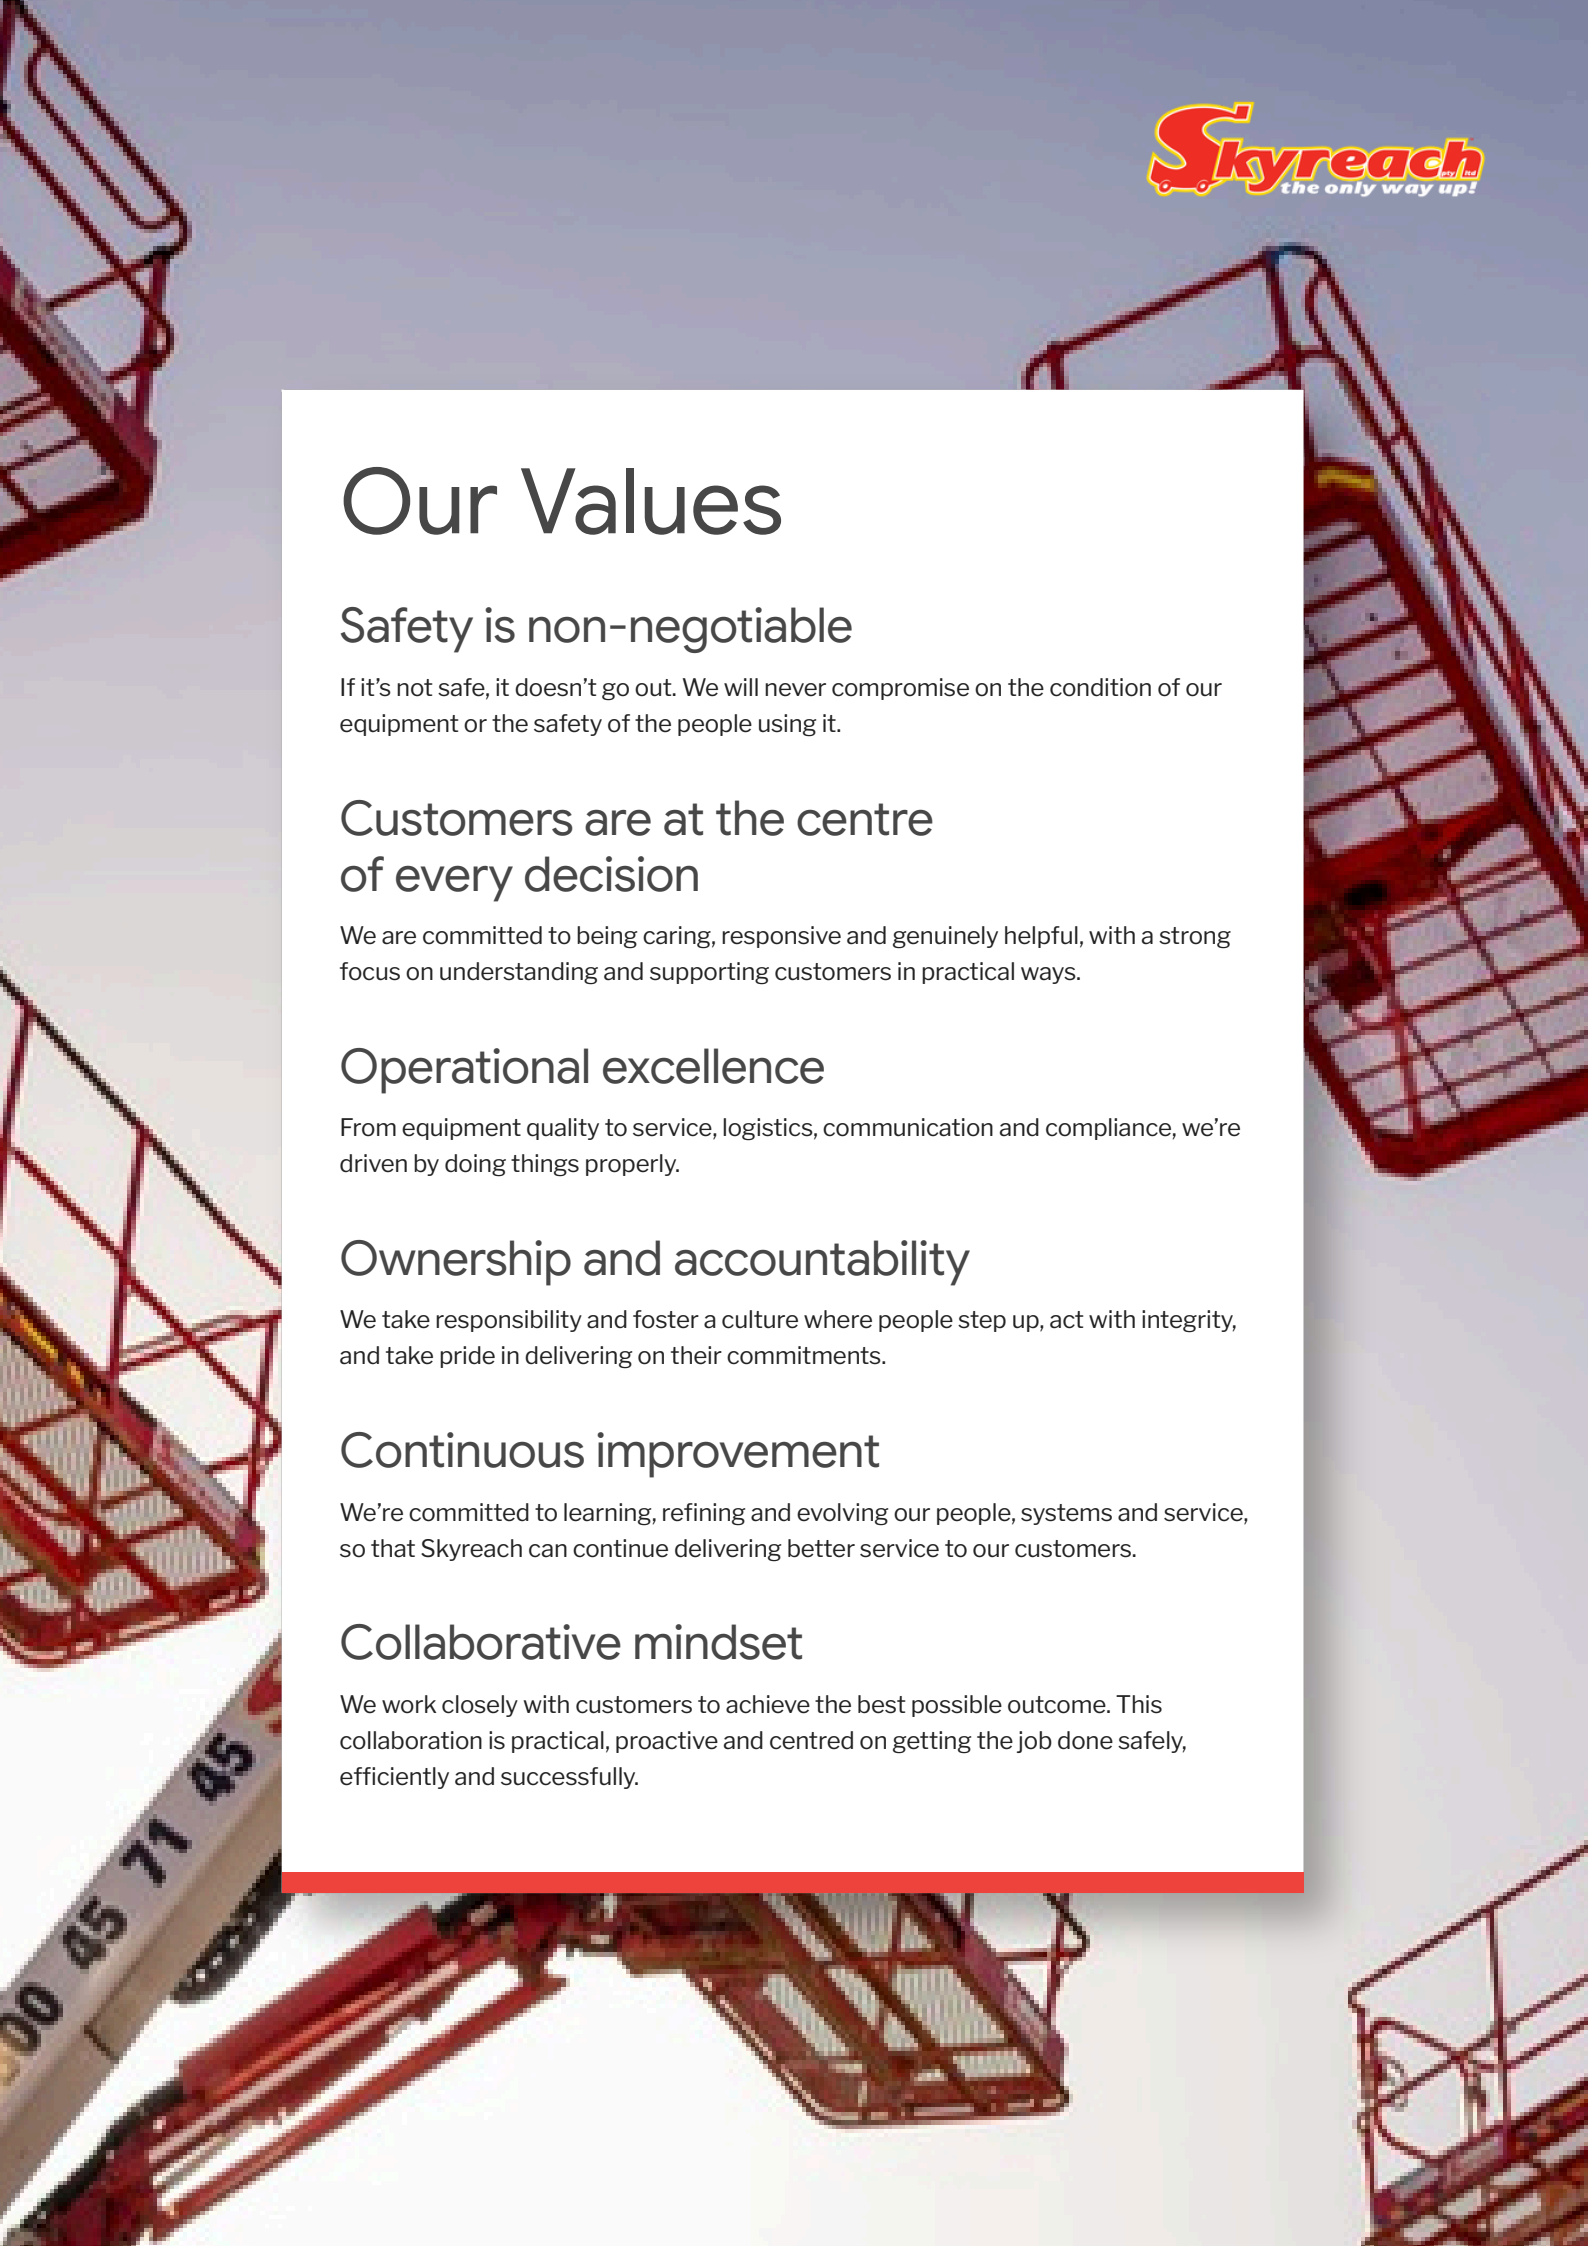

Inside black box on platform:
Operator's handbook for the relevant type and model of machine.

Fixed to the platform:
A green 'ready to rent' tag displaying the last service date gives a clear visual indication that the equipment is fully serviced and ready for hire.

"Sincere thanks for all of your support, assistance, and patience throughout [our recent production]. Nothing has ever been too much trouble, and your prompt responses, professionalism, and willingness to help have made my job so much easier."

SAMANTHA SEAGER,
CONSTRUCTION COORDINATOR AT SERVO PRODUCTIONS

Our Values

Safety is non-negotiable

If it's not safe, it doesn't go out. We will never compromise on the condition of our equipment or the safety of the people using it.

Customers are at the centre of every decision

We are committed to being caring, responsive and genuinely helpful, with a strong focus on understanding and supporting customers in practical ways.

Operational excellence

From equipment quality to service, logistics, communication and compliance, we're driven by doing things properly.

Ownership and accountability

We take responsibility and foster a culture where people step up, act with integrity, and take pride in delivering on their commitments.

Continuous improvement

We're committed to learning, refining and evolving our people, systems and service, so that Skyreach can continue delivering better service to our customers.

Collaborative mindset

We work closely with customers to achieve the best possible outcome. This collaboration is practical, proactive and centred on getting the job done safely, efficiently and successfully.

Case Studies

Steep slope solution

70% reduction setup time

Safe access on a difficult site

CONSTRUCTION

Overcoming complex building site access

A Gold Coast residential builder faced the challenge of constructing an outdoor entertaining area on a steep, poorly accessible site. Scaffolding options were ruled out, and crane hire did not fit the budget constraints; however Skyreach's site visit pointed to the Jibbi Boom Lift as the ideal equipment for the task.

This compact tracked boom with dynamic auto-levelling proved to be the ideal solution for the extreme terrain. The Jibbi Boom was successfully deployed, cutting setup time by 70% compared to traditional stabiliser-fitted lifting equipment, and keeping the customer's project on track without the expense of crane hire.

<24 hours turnaround

No production delays

85ft knuckle booms for heavy lighting equipment

EVENTS & FILM

Fast Friday night turnaround for film production

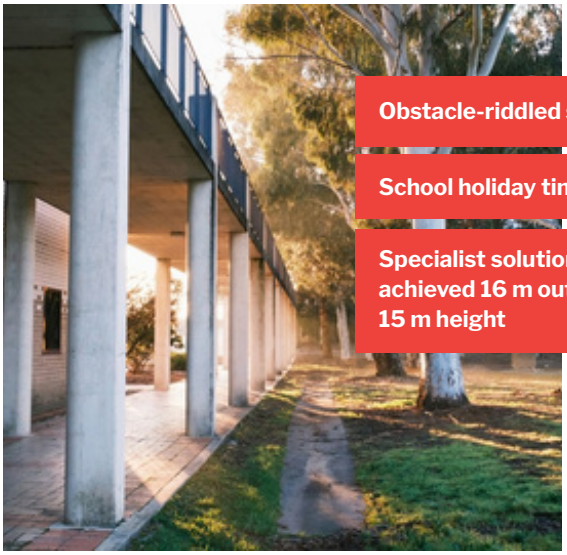

A long-standing film production customer, already running a large Skyreach fleet on an active shoot, made an urgent Friday-evening request for two additional 85ft knuckle booms needed by the weekend.

With fleet stock nearly exhausted, the Skyreach team coordinated a fast after-hours response, accessing the yard to prepare and dispatch two available 85ft stick booms. Both machines were delivered and confirmed on site by 10:30am Saturday, allowing the shoot to proceed uninterrupted.

Our rapid turnaround and personalised service highlight Skyreach's ability to meet urgent, after-hours demands for our film and events customers.

Obstacle-riddled site

School holiday timeline

Specialist solution achieved 16 m outreach / 15 m height

INFRASTRUCTURE

Reliable service for tight project timelines

A Melbourne school needed a section of roof flashing repaired within a short school holiday window, but difficult access amongst tables, trees, flagpoles and garden beds called for a specialist access solution.

After a detailed site visit, Skyreach's team eliminated crane hire due to one difficult accessway, and instead supplied a compact height access unit capable of 16m outreach and 15m height. Small enough to fit through a standard doorway, our hire solution allowed the customer to safely complete the repair on schedule and came in at a better price than a crane-based solution. Despite initially being unfamiliar with the machine, our long-term customer was pleased with our recommendation, and with our fast turnaround and service.

Technician on call

MINING & RESOURCES

Maximum uptime for Carmichael Mine

Skyreach partnered with Hawkins Group on a 10-month build of a 5,700 sqm heavy vehicle workshop at the remote Carmichael Mine in North Queensland.

Selected for its expertise in complex mining hire, Skyreach supplied straight stick booms and diesel & electric scissor lifts, with each machine mine-spec upgraded and compliance-checked before mobilisation. A dedicated on-site fitter from the Skyreach team performed preventative maintenance aligned with the build schedule, with standby replacement machines available locally.

This tailored, hands-on approach minimised unplanned downtime and delays, reducing Hawkins Group's risk exposure and enabling efficient project completion despite the site's remote, demanding conditions.
